### SIMPLIFYING EXPRESSIONS

Mrs. Thornberry wrote three examples of expressions on the board as shown. Using the examples, write your prediction of what makes something a mathematical expression in the space below her examples.

-25

scaffolded  
concepts

EXPRESSION	<ul style="list-style-type: none"><li>A mathematical and _____</li><li>Will not have an _____</li></ul>
TERM	<ul style="list-style-type: none"><li>A term is a constant or a variable or a combination of the two.</li><li>Separated by _____</li></ul>
COEFFICIENT	<ul style="list-style-type: none"><li>The number in front of a variable.</li></ul>
LIKE TERMS	<ul style="list-style-type: none"><li>Must have both the same variable and the same exponent (or no exponent).</li></ul>

Use the definitions above to help you complete the following.

1. Give an example of an expression with four terms.

2. List an expression with three terms.

4. Give an example of a like term for each.

a.  $14y$  \_\_\_\_\_ b.  $-9b$  \_\_\_\_\_

5. Circle the letter of any card that gives an example of like terms.

A.

B.

$\frac{1}{4}c$  and  $-9c$

$2.2n$  and  $2.2$

### SIMPLIFYING EXPRESSIONS

- We can simplify algebraic expressions by combining \_\_\_\_\_.
- Be careful when you are combining terms to check the \_\_\_\_\_ that is in front of the term.

A group of friends went to the movies and bought the tickets (t), drinks (d) and popcorn (p) shown.

- Use the given variables to write an expression representing the individual items purchased:

- Simplify the expression by combining like terms.

In 6-11, simplify each expression by combining like terms.

6.  $13r + 5r + 2n$

7. \_\_\_\_\_

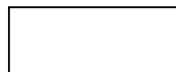

9.  $-18.7b + 4b - 0.3b$

10. \_\_\_\_\_

Apply your knowledge of simplifying expressions to solve the problem.

12. Simplify an expression for the perimeter of the rectangle.

$17.4x - 0.8$  cm

Perimeter: \_\_\_\_\_

Summarize today's lesson:

### SIMPLIFYING EXPRESSIONS

Match each expression with the correct simplified expression. Use the corresponding letter with each solution to help you solve the riddle.

1 $4x - 2x - 20x + x$	2 $-\frac{4}{7} + \frac{2}{7}x - 14x + \frac{4}{7}$
3 $7 - 9x - 15 + 12x$	4 $-2.4x + 3.8x - x$
5 $-0.8x + 40 - 8x - 35$	6 $12\frac{5}{6}x - 14x + \frac{1}{6}x$
7 $-3x + 14 - 11 + 11x$	8 $3.75x - 5 - 8.75x + 4.5 + 0.5$

A: $-5x$	E: $-8.8x + 5$	O: $3x - 8$	L: $0.4x$	G: $-x$	W: $8x + 3$
R: $-17x$	B: $-13\frac{5}{7}x$	M: $-8x$	U: $-2\frac{1}{6}x$	D: $-13\frac{1}{7}x$	N: $-5.5x$

## LINEAR EQUATIONS OVERVIEW

### READINESS STANDARDS

**8.8C** Model and solve one-variable equations with variables on both sides of the equal sign that represent mathematical and real-world problems using rational number coefficients and constants.

### SUPPORTING STANDARDS

**8.8A** Write one-variable equations or inequalities with variables on both sides that represent problems using rational number coefficients and constants.

**8.8B** Write a corresponding real-world problem when given a one-variable equation or inequality with variables on both sides of the equal sign using rational number coefficients and constants.

### DIG IDEAS

- Mathematical and real-world situations can be modeled and solved with equations.
- Inequalities and equations

### ESSENTIAL QUESTIONS

- How can equations be used?
- When would it be likely that
- How do I know which inequ

DAY 1	DAY 2	DAY 3	DAY 4	DAY 5
Simplifying Expressions	One and Two-Step Equations	Multi-Step Equations	Equations with Variables on Both Sides	Expressions and Equations Quiz
Student Handout 1 Homework 1	Student Handout 2 Homework 2			
DAY 6	DAY 7			
Writing Equations with Variables on Both Sides	Writing Inequalities with Variables on Both Sides			
Student Handout 5 Homework 5	Student Handout 6 Homework 6			

## LINEAR EQUATIONS UNIT OVERVIEW

TOPIC	TEACHING TIPS
One and Two-Step Equations	<ul style="list-style-type: none"><li>To practice, consider partnering students and showing an equation on the board. Have one student instruct the other on how to solve as the student listening writes each step and solution. Then, show a new equation and have students switch roles. This gives students a chance to teach and reinforce what they remember about one and two-step equations from Grade 7.</li></ul>
Multi-Step Equations	<ul style="list-style-type: none"><li>After students have had time to practice, have "Board Races." Two students will come up to the board and race to solve an equation shown on the board. The person who solves it correctly first stays up at the board for the next equation with a new competitor. I like to have the students who aren't at the board working the equations on notebook paper to help check the solutions. An element of competition makes repetitive practice more fun!</li></ul>
Equations with Variables on Both Sides	<ul style="list-style-type: none"><li>Search <a href="https://illuminations.nctm.org">illuminations.nctm.org</a> for "Geology Rocks Equations" for a great visual and lesson where students use tactile representations to solve for missing values.</li><li>Use dry erase markers to practice on white boards to make practice more fun.</li></ul>
Inequalities with Variables on Both Sides	<ul style="list-style-type: none"><li>Knowing the correct inequality sign to use will be key to students mastering this topic. When students are trying to decide the sign for a phrase, such as "no more than" or "at least," I like to have them ask 3 questions:<ol style="list-style-type: none"><li>Can it be equal to the value?</li><li>Can it be more than the value?</li><li>Can it be less than the value?</li></ol>Furthermore, using the phrases in every day situations can help students know which symbol is correct. For example, if students are told they have to have "at least" a 90 to make an A, they know it can be greater than or equal to a 90 because of their familiarity with the topic.</li></ul>

Date \_\_\_\_\_ Pd \_\_\_\_\_

**QUIZ: EXPRESSIONS AND EQUATIONS**

Answer each question and be sure to show work when necessary.

1. Simplify the expression by combining like terms.

$$12 + 3.4x - 5.4x - x$$

A.  $-3x + 12$       B.  $9x$

2. Which value of  $x$  makes the equation true?

$$\frac{2}{5}x + 10 = 14$$

A.  $x = 100$       B.  $x = 12$

3. Which of the following answer choices collected on the left and the constants have the same value?

A.  $-9x = 15$       B.  $5x = 15$

4. After making the swim team, Farrah purchased a swimsuit, a swim cap, and a pair of goggles. The swimsuit was twice as much as the goggles, and the swim cap was half the price of the goggles. If the total cost of the items was \$59.50, what was the price of the swimsuit?

**LINEAR EQUATIONS STUDY GUIDE**

Solve each of the problems below. Be sure to ask questions if you need more help with a topic.

**I CAN WRITE AND SOLVE LINEAR EQUATIONS. 8.8C**

1. Solve the equation:

$$\frac{x}{-3.5} + 33 = 30$$

2. Solve the equation:

3. A sprout in Jessie's garden is  $5\frac{1}{5}$  cm tall. It grows  $1\frac{3}{10}$  cm each week. Write and solve an equation in order to determine how many weeks it will take for the plant to be 10 cm tall.

Equation: \_\_\_\_\_  
Solution: \_\_\_\_\_

**I CAN WRITE AND SOLVE MULTI-STEP EQUATIONS. 8.8B**

5. Solve the equation:

$$-4 + w + 17 - \frac{2}{3}w = 16$$

7. The perimeter of the rectangle shown is 12. Find the value of  $x$ .
