INTRO TO RATIOS

RATIO

- A ratio is a comparison of two quantities, which describe the same attribute. They can be written several ways.

Example: There are two dogs to every three cats

Words: 2 do _____ 2

- Ratios can also be written as fractions.

Use the faces below to practice writing ratios.

Teeth to No teeth	Eyebrows to Faces
Big Eyes to Teeth	Closed Eyes to Tongues

a. Write the ratios below. Then, determine the order in which a ratio is written.

Teeth to No Teeth _____

The order in which a ratio is written is _____

1. In the lunchroom, there were 100 milk cartons purchased.

a. What is the ratio of the number of milk cartons purchased?

b. What is the ratio of the number of milk cartons purchased?

scaffolded
concepts

Unit: Ratios
Homework 1

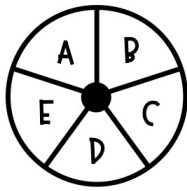

Name _____
Date _____ Pd _____

INTRO TO RATIOS

Apply your understanding of ratios to complete the table below.

TALLY	TOTAL SPINS
A	
B	
C	

2. Using your pencil and a paper clip, spin the spinner 20 times below. Mark your results using tally marks in the chart below.

a. What is the ratio of spins landing on A?

b. Describe a ratio relationship based on the data.

c. What would you need to spin in order to have a ratio of 1:1?

d. If you were asked to spin the spinner 20 times, what data would you expect?

Apply your understanding of ratios to the following problems.

3. Mrs. Johanson is decorating her classroom for fall. She has five red, seven yellow, and three orange leaves to hang from her classroom. Record the ratios below.

a. red to yellow _____

b. orange to total _____

c. total to yellow _____

5. Yvette looks at the picture at the right. The ratio of hearts to stars is 3:5. Explain whether Yvette is correct.

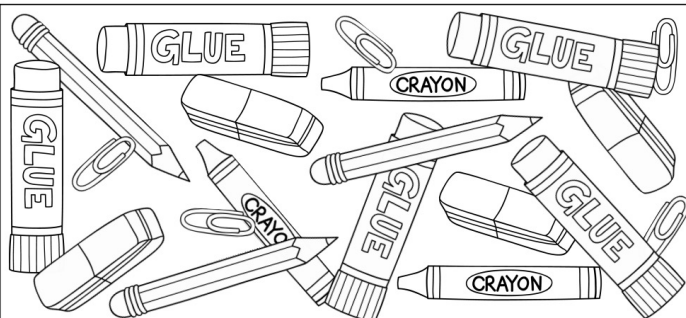

Summarize today's lesson:

Unit: Ratios
Homework 1

Name _____
Date _____ Pd _____

INTRO TO RATIOS

Apply your understanding of ratios to complete the table below.

Pencils to Glue	Paper Clips to Erasers	Crayons to School Supplies	Erasers to Pencils
Writing Utensils to School Supplies	Glue to Paper Clips	Crayons to Erasers	Paper Clips to Pencils

Answer the following questions. Be sure to justify your response.

1. At the ice cream shop, there are 11 shakes sold for every 6 malts. What is the ratio of malts to shakes?

2. Seven out of ten dentists prefer Pearly White toothpaste. What is the ratio of dentists who do not prefer Pearly White to those who do?

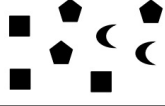

3. An animal shelter currently only has 19 dogs and 13 cats. What is the ratio of cats to animals?

4. Amelia recorded the ratios shown below using the pictures. Unfortunately, her paper was torn and some of the shapes are missing. Use Amelia's answers below to sketch the missing shapes.

a. moons to squares 3:7

b. pentagons to total 5:15

c. squares to pentagons 7:5

RATIOS OVERVIEW

STANDARDS

6.RP.1 Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities.

6.RP.3 Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations.

6.RP.3a Make tables of equivalent ratios relating quantities with whole number measurements, find missing values in the tables, and plot the pairs of values on the coordinate plane. Use tables to compare ratios.

BIG IDEAS

- Ratios exist in everyday life.
- Ratios are a way of comparing

ESSENTIAL QUESTIONS

- How can a ratio be used to compare?
- How can ratios be used to solve problems?
- What pattern do you notice?

RATIOS PACING GUIDE

DAY 1	DAY 2	DAY 3	DAY 4	DAY 5
Intro to Ratios	Equivalent Ratios	Ratio Tables	Comparing Ratio Tables	Ratio Application
Student Handout 1 Homework 1	Student Handout 2 Homework 2			
DAY 6	DAY 7			
Ratios Quiz	Representing Ratios with Equations			
Quiz 1	Student Handout 6 Homework 6			

RATIOS OVERVIEW

TOPIC	TEACHING TIPS
Equivalent Ratios	<ul style="list-style-type: none">• Grab any colorful manipulatives (color tiles, pattern blocks, snap cubes, etc) and have students create their own ratios. Give them a ratio of 4 blue to 3 green and ask them to produce an equivalent ratio. Ask students to share their ratios and strategies, and help students to connect them to scaling.• Emphasize the concept that equivalent ratios are a result of a multiplicative comparison and can be scaled.
Problem Solving with Ratios	<ul style="list-style-type: none">• Though it is common to teach cross-multiply and divide, students should focus on the multiplicative comparison and use scaling if possible. It results in a lot less math and requires critical thinking to determine the best method.• I personally liked to teach students to set up a tic-tac-toe board so that there was a space for students to include a label. Tape diagrams are another excellent option for students who struggle and need a pictorial representation.
Ratio Tables	<ul style="list-style-type: none">• Students should be familiar with both creating a table and graph from a ratio and using a table or graph to determine the ratio. Emphasize that any equivalent ratios will reduce to the same ratio.
Ratios and Equations	<ul style="list-style-type: none">• Writing an equation from a situation can be difficult. One tip is to have students determine the y-value when x is zero; this represents the additive portion of the equation.
Ratios and the Coordinate Plane	<ul style="list-style-type: none">• This is an excellent opportunity to practice graphing skills with real-world application. Students should be able to connect the x-value with the x-axis and then explain it in the form of a situation.• For students who struggle, encourage them to create a table of values before answering any questions. Remind students that the x-values in a table are always on the left or on the top. The y-values are always on the right or on the bottom.
